Example#1

Write a program to check the eligibility of an applicant for a bank loan. Only customers who spent 2 or more years with the bank and have a salary of 5000 or more are eligible for the loan.

```java
import java.util.*;
public class Loan {

    public static void main(String[] args) {
        Scanner scan = new Scanner (System.in);

        System.out.print ("Enter your salary: ");
        double salary = scan.nextDouble();

        if (salary >= 5000){
            System.out.print ("Enter years with the bank: ");
            int years = scan.nextInt();
            if (years >= 2)
                    System.out.println ("You can have a loan");
            else
                    System.out.println ("You are not eligible because you didn\'t spend more " +
                                        "than 2 years");
        }

        else
            System.out.println ("Sorry, You cannot apply for a loan beacaue your salary " +
                                "below 5000");

    }
}
```
